Subject: revisions to traffic light section
Attachments: 2015-05-18 Evaluation and Response.docx

As many of you may well know if you participated in the SLC discussions, the editorial committee decided to change the name of our section from Traffic Light System to Evaluation and Response. The reasoning behind this was that there are other approaches and even variations on existing traffic light systems that may have some utility for various entities employing such an approach. As such, attached is an outline of items that might be included in this revised section. Your comments and suggestions on such are welcomed. It is hoped that much of the current language can just be dropped into this section and parts of such may just reference information from other sections of the document. I look forward to working with all of you to develop this section of the document.

Ed Steele
Water Technical Manager
GE Global Research
Oil and Gas Technology Center-Oklahoma City
